| The MAILING DATE of this communication app Period for Reply | ears on the cover sheet with the c | orrespondence address | |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). | | | |

Art Unit: 3711

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. The change to claim 5 is agreed with. Claims 4 (line 1) and 17 (line 2) are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "may" is indefinite. It is uncertain if the function being referred is required to be performed or not. The examiner recommends replacing the word with the words -- is able to --.

Content of Specification

3. The change to the title is agreed with.

Specification

4. The argument and the changes to the disclosure are agreed with and the objections are removed.

Art Unit: 3711

5. The new abstract is agreed with.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 3-5 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ryan in view of Jessen and Kobayashi.

Ryan discloses a golf club with a parallax corrected (abstract, Col. 1, Lns. 19-25, 29-35) sweet spot markings, a marking extending from a point at the intersection of the face surface and the top surface (Fig. 5), and a reference line on a drawing showing non-corrected target lines and corrected lines (Figs. 2, 3, 5). Ryan does not disclose have markings on a head for a non-corrected target marking but clearly an artisan skilled in assisting a golfer in aligning a club to a ball would have selected a suitable marking arrangement in which having both the non-corrected marking and a corrected marking as shown by the reference lines in figures 2-3 and 5 is included.

Ryan lacks a grip, sweet spot target line markings, a line extending from a point at the intersection of the face surface and the top surface, lines on a head showing non-corrected target lines and corrected lines, an increased width line on a top surface ending at a point at the intersection of the top surface with the bottom surface and

Application/Control Number: 10/692,517

Art Unit: 3711

center of gravity located behind a sweet spot. Jessen discloses a golf club having a grip (Fig. 2), an alignment marking (Ref. No. 15, Col. 2, Lns. 20-28) being in the form of a broad line on a top surface (Fig. 6) extending from a point at the intersection of the face surface and the top surface and a line on a head showing non-corrected target line (Fig. 6). Kobayashi discloses a head having a top surface intersection in a rear of a head with a bottom surface (Fig. 2) and center of gravity located behind a sweet spot (Col. 2, Lns. 44-53) in order to increase distance of flight of a ball with improved directing performance (Col. 2, Lns. 59-62). In view of the patent of Jessen it would have been obvious to modify the golf club of Ryan to have a grip in order to minimize the vibrations felt by a player. In view of the patent of Jessen it would have been obvious to modify the golf club of Ryan to have increased width lines on a top surface ending at a back end of a top surface showing a corrected target line in order to utilize a parallax corrected line instead of an arrow marking to assist a player in properly aiming a head who prefers a line while playing a round of golf. In view of the patent of Kobayashi it would have been obvious to modify the head of Ryan to have a top surface intersect with a bottom surface in order to use the advantages of parallax correction for an alignment of a club for a head which has a bottom surface which intersects with a top surface at a rear end. As such a line on a top surface would end at a point at the intersection of the top surface with the bottom surface. In view of the patent of Kobayashi it would have been obvious to modify the head of Ryan to have a center of gravity located behind a sweet spot in order to increase distance of flight of a ball with improved directing performance.

It would have been obvious to modify head of Ryan to have both lines on a head showing a non-corrected target line and a corrected line in order to assist a player in showing a player or a golf manufacturing company how sever a ball is misaligned from a sweet spot by not having a parallax correction alignment marking and the need to have a parallax corrected alignment.

With respect to claims 4-5 and 17, very little weight is given to the method steps of how the parallax corrected target line is made on the head since this is an apparatus claim and not a method claim. Weight is give to what an apparatus is and not how it is made. The club due to the combination of Ryan in view of Jessen and Kobayashi is the same product as that claimed in claims 4-5 and 17.

Response to Arguments

8. The argument that Ryan does not show lines that appear on the golf club and are only drawing lines is agreed with. As such the examiner has modified the rejection and has not made this Office Action final. However based on the reference lines shown on the drawings by Ryan, the examiner believes it would be obvious to one skilled in the art to show these drawing reference lines as actual lines on a golf club since it is practiced to have lines on a golf club. The argument that it is improper to use the reference of Ryan due to the corrected target marking compensating for dynamic conditions (shaft bow) and static conditions (sight error) is disagreed with. Not all golfers have strengths which result in a shaft bowing during the swing or not all golfers choose to swing a club

Application/Control Number: 10/692,517 Page 6

Art Unit: 3711

at a force to produce bowing. It would be obvious to correct only for static conditions to one skilled in the art. The argument that it is improper to use Jessen since Jessen does not consider bowing or parallax is disagreed with. Jessen was not used to show an alignment marking being corrected but that it is known to have lines as alignment markings. Ryan was used to show corrected alignment markings. The argument that the reference of Kobayashi is improper due to Kobayashi never using terms of top surface and bottom surface is disagreed with. Though Kobayashi does not mention these terms clearly figure 2 shows a top surface intersecting with a bottom surface. There is no intermediate surface between these surfaces.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steve Blau whose telephone number is (571) 272-4406. The examiner is available Monday through Friday from 8 a.m. to 4:30 p.m.. If the examiner is unavailable you can contact his supervisor Greg Vidovich whose telephone number is (571) 272-4415. Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0858. (TC 3700 Official Fax 703-872-9306)
